

At Lithos Robotics, top-of-the-line technology is not off-the-charts expensive.

sentinel^{RSD}™

Remote Surveillance Device keeps eyes on the target without risk to the human team.

Sentinel RSD units are stationary, remote surveillance robots that tirelessly scan a hot scene with 36X cameras, keeping eyes on the target while the tactical team remains safely under cover.

Deploy Sentinels around a building for unparalleled surveillance capability.

Placed on opposite corners of a building, a pair of Sentinels can cover a whole scene, with all video feeds going back to one central command location. Place another at the point of egress or on a specific window and you have a network of video coverage that gives you a tactical advantage at minimal risk to human life.

Use your intelligence.

The dynamics of a situation can change rapidly and unexpectedly. For law enforcement, this means life-and-death decisions have to be made in fractions of seconds. Simply put, the more information you have the better your decision will be.

A full suite of advanced functions

- All-weather
- 36X pan/tilt/zoom camera
- Day/night operation
- Still photos and video playback
- Each unit is a WiFi hotspot/digital radio repeater
- LED illuminator built in
- Deploy via robot or officer
- Works with other Sentinels or TacBot Remote Infiltrator

Lithos Robotics
rock solid.
