

At Lithos Robotics, top-of-the-line technology is not off-the-charts expensive.

tacBOT™

Remote infiltrator robots
deploy in minutes and send
real-time intel back to the
command center.

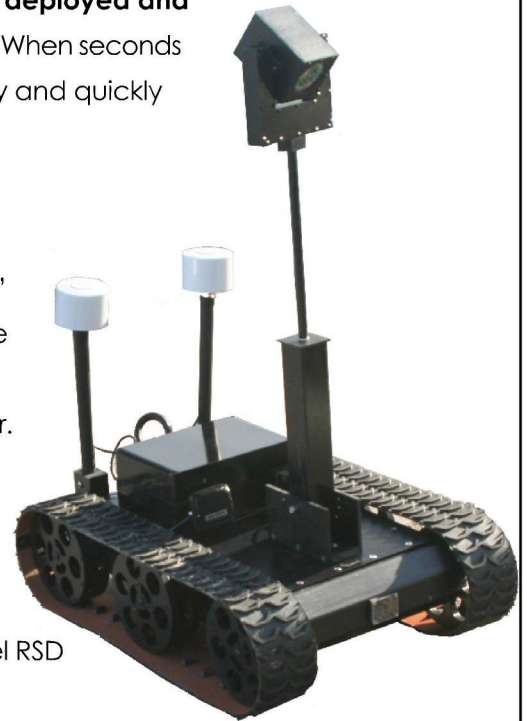

TacBOT gives you the tactical advantage in three easy steps. The tacBOT gives you a tactical advantage. Delivered, deployed and controlled by one officer from a position of cover.

1. Arrive on scene, deploy tacBOT.
The tacBOT can be delivered, deployed and driven by one officer in minutes. When seconds count, getting eyes on the target safely and quickly can save lives.

2. Infiltrate the hot zone.
TacBot is a robotic "point man" that carries out recon in hostile territory. Send tacBOT into harm's way while the human team stays under cover. Climb stairs, look in windows, look for booby traps. Video from the boom-mounted 36X camera streams to the command center from up to a mile line-of-sight (even farther with a Sentinel RSD acting as a digital repeater).

3. Use your intelligence.
tacBOT opens up many options to a tactical team commander. Need more intel? Deploy one or more Sentinel units for surveillance. Or open a dialogue using tacBOT's sensitive audio tools. Most importantly, in a fast-changing high-risk scenario, your human team's safety can be maximized while tacBOT does its job.

Lithos Robotics
rock solid.
